3. NMEA 0183 Protocol

The NMEA protocol is an ASCII-based protocol, Records start with a \$ and with carriage return/line feed. GPS specific messages all start with \$GPxxx where xxx is a three-letter identifier of the message data that follows.

NMEA messages have a checksum, which allows detection of corrupted data transfers.

YIC52925GMGG-33 modules support the following NMEA-0183 messages: GGA, GLL, GSA, GSV, RMC and VTG.
